Self-Made Assignment - MS Word

Inserting Charts in MS Word

Make MS Word assignment using chart option in MS Word.

1. Introduction

In 2024, many countries are spending more money on renewable energy. Renewable energy is energy from natural sources, like the sun, wind, and water. Countries are choosing renewable energy because it helps the environment, reduces pollution, and uses energy that won't run out.

Governments are giving money to build more renewable energy projects. These projects help make clean energy, which is good for the environment and helps reduce climate change. Countries also want to rely less on oil and coal, which are harmful to the planet. Renewable energy can also create jobs and help the economy. In this assignment, we will see how much money five countries are spending on renewable energy in 2024.

2. Investment Data in 2024

The table below shows the money spent on renewable energy in 2024 by five countries. This information will be used to make a pie chart.

Country	Investment (in Billion USD)
United States	50
China	80
Germany	25
India	30
Brazil	15

The pie chart shows how much each country is spending on renewable energy in 2024. China is spending the most, followed by the United States. This shows that these countries want to make energy that is clean and safe for the planet. Germany, India, and Brazil are also spending money on renewable energy.

Spending more on renewable energy is a good choice for the environment. It helps reduce pollution, creates new jobs, and makes countries less dependent on fossil fuels. In the future, we can expect more countries to spend money on clean energy to protect our planet.
