Self-Made Assignment - C Language

String Functions in C Language

1. Write a C program that calculates the length of a string without using the built-in `strlen()` function.

- Example input : "Hello"
- Example output : 5

2. Write a C program to find the first occurrence of a character in a string.

- Example input : "Hello , how are you?", character to find: 'o'
- Example output : "first occurrence at index 4"
