Self-Made Assignment - Java Script

Operators in Java Script

Ques 1:- Write a JavaScript program that uses the assignment operator (=) to assign values to variables and then displays the result of the assignments using `document.write()`.

- Let num=10
- Let num=5 Then calculate the sum of num1 and num2 and display the result of the addition and update the value of num1 to 15 using the assignment operator.

Ques 2:- Write a JavaScript program that uses the assignment operator (=) to assign a string to a variable and then concatenate it with another string to form a sentence. Display the sentence using `document.write()`

- The = operator is used to assign strings to `greeting` and `name`.
- The strings are concatenated using the + operator, and the result is assigned to the `message` variable.
- And this concatenated message is displayed on the webpage.

Greeting message: Hello,Vihan!
