Self-Made Assignment - MS Power Point

Introduction to Digital Presentation, Create, Open and Save

Make the Presentation based on Cyber security

Slide 1: Title Slide

**Title:** Cyber security Essentials

**Subtitle:** Protecting Digital Assets in the Modern World

Slide 2: Introduction to Cyber security

1. Cyber security refers to protecting computers, networks, and data from unauthorized access or attacks.
2. It is essential for individuals, businesses, and governments to safeguard sensitive information.
3. Common threats include malware, phishing, ransomware, and hacking.

Slide 3: Common Cyber Threats

1. **Malware** – Malicious software like viruses, worms, and trojans.
2. **Phishing** – Fraudulent emails or messages designed to steal sensitive information.
3. **Ransomware** – Cybercriminals encrypt data and demand payment for access.
4. **Denial-of-Service (DoS) Attacks** – Overloading systems to make them inaccessible.

Slide 4: Cyber security Best Practices

- Use strong and unique passwords for different accounts.
- Enable two-factor authentication (2FA) for extra security.
- Keep software and systems updated to patch vulnerabilities.
- Avoid clicking on suspicious links or downloading unknown attachments.

Slide 5: Role of Antivirus & Firewalls

- **Antivirus Software:** Detects and removes malicious software.
- **Firewalls:** Act as a barrier between trusted and untrusted networks.
- **Encryption:** Protects sensitive data by converting it into unreadable formats.

Slide 6: Conclusion & Importance

- Cyber security is crucial to prevent financial loss, identity theft, and data breaches.
- Awareness and vigilance are key to staying safe online.
- Regular updates and proactive security measures help reduce cyber risks. **Final Message:** Stay alert, stay secure!
