Make this following file and save file the name “Unemployment”

Unemployment refers to the condition in which individuals who are capable of working, are actively seeking work, but are unable to find a job. It is a critical economic indicator, as it reflects the health of an economy and can have significant social and psychological impacts on those affected. Unemployment can arise due to various reasons, including economic downturns, technological advancements that render certain jobs obsolete, seasonal fluctuations, or mismatches between workers' skills and available jobs. High unemployment rates often lead to reduced consumer spending, lower economic growth, and social unrest. Governments and policymakers monitor unemployment closely and often implement strategies, such as job training programs, public works, or monetary policies, to reduce unemployment and stimulate job creation.
