Document Protection and Security in MS Word

Create a document in MS Word and set your "Nature" as the password for the document.

Environment is the nature and surroundings in which all plants, animals, humans and other living beings live and operate. Every living and non-living thing is related to environment. Environment plays a major role in giving birth to a new life, in the growth of a life, survival of the life and the over-all well-being of any life. It provides us with fresh air that we breathe, water that we drink, food that we eat and almost all the resources for our survival.

Use Font Color Red with Font Style Bold.

Environment also provides us with several other natural resources that are very important. Natural resources are the resources that environment gives us naturally without we creating it. It includes sunlight, atmosphere, land, water, plants, animals, sea life, minerals, different species and everything that occurs naturally on earth.

Use Font Color Brown with Font Style Italic.

It provides us with the resources such as fuels, metals, and most forms of energy to use. Yet we are exploiting environment with the activities that harm environment and are overusing the resources. Human activities transform the natural environment in to human environment by constructing buildings, industries, firms and using the landscapes for the purpose of development. It is vital to use the natural resources carefully and avoid harming the nature for the healthy and naturally wealthy life.

Use Font Color Blue with Font Style Underline.

The Impact of Pollution on the Environment

Pollution is one of the most significant threats to the environment today. It occurs when harmful substances, such as chemicals, waste, and noise, are introduced into the air, water, and soil. These pollutants have detrimental effects on both the natural world and human health. The impact of pollution is far-reaching, affecting ecosystems, wildlife, and the quality of life for millions of people worldwide.

Document Protection and Security in MS Word

Air pollution, caused by industrial emissions, vehicle exhaust, and burning of fossil fuels, is one of the most common forms of pollution. It leads to the formation of smog, acid rain, and respiratory problems in humans. It also contributes to global warming by increasing the concentration of greenhouse gases in the atmosphere. Water pollution, caused by the discharge of industrial waste, agricultural runoff, and untreated sewage, poisons aquatic life and makes water unsafe for consumption. Additionally, soil pollution due to chemicals and waste disposal contaminates agricultural land, leading to reduced crop yields and potential health risks.

Use Font Color Black with Font Style Underline.

The consequences of pollution extend to the loss of biodiversity. Pollutants can poison the habitats of plants and animals, causing death or migration. For example, plastic waste in the oceans harms marine life, and chemical pollutants can disrupt the reproductive systems of fish and other wildlife.

Use Font Color Green with Font Style Italic.
