## Self-Made Assignment - Java Script

### Window Object in JavaScript

#### Tasks:

#### Task 1: Accessing Window Object Properties

- Create a JavaScript program that prints the following properties of the **window** object:
  1. window.innerWidth
  2. window.innerHeight
  3. window.location
  4. window.navigator
  5. window.document

**Hint:** Use document.write() to display these properties.

#### Task 2: Prompt for User Input

- Create a program that:
  1. Uses **window.prompt()** to ask the user for their name.
  2. Displays a greeting message in the console using the name provided.

**Example:** Hello, [User's Name]! Welcome to the website.

#### Task 3: Change Window Location Using Button

- Write a JavaScript program where:
  1. A button is present on the page.
  2. When the button is clicked, the page redirects to a new URL (e.g., "https://www.google.com") using **window.location.href**.

#### Task 4: Alert After Page Load

- Create a program that:
  1. Shows an alert after the window has fully loaded, using **window.onload**.
  2. The alert should say "Page Loaded Successfully!"
