Self-Made Assignment - Java Script

Navigator Object in JavaScript

Tasks:

Task: Display the User's Online Status

Objective: Use JavaScript to check if the user is online or offline and display it on the webpage.

Instructions:

1. Create a basic HTML page with a `<script>` tag.
2. Use `navigator.onLine` to check if the user is online.
3. Display either "You are Online" or "You are Offline" based on the result.

Hints:

- The `navigator.onLine` property returns true if the user is online and false if they are offline.
- Display the result on the page using `document.write()`.

Task: Display the User Agent String

Objective: Display the entire user agent string that contains details about the user's browser and operating system.

Instructions:

1. Create a basic HTML page.
2. Use `navigator.userAgent` to get the user agent string.
3. Display the user agent string on the webpage.
