Self-Made Assignment -Java Script

Location Object in JavaScript

Tasks:

Task: Working with the Location Object in JavaScript

Instructions:

1. Create an HTML file with a button that says "**Get Current URL**".
2. When the button is clicked, display the current URL of the page using the **location.href** property.
3. Add another button that, when clicked, redirects the user to **Google's homepage** using **location.assign()**.
4. Add a third button that reloads the page using **location.reload()**.
