Self-Made Assignment - C Language

Structure in C Language

Assignment Task:

Write a C program using **structures** to store the details of **two persons** (name and age), and determine who is older.

Requirements:

1. Define a structure named Person with:
 - char name[50];
 - int age;
2. In the main() function:
 - Declare two variables of type Person.
 - Take input for name and age of both persons.
 - Compare their ages and print who is older.

Resultant Output:

Output

```
Enter name of person 1: arun
Enter age of person 1: 21
Enter name of person 2: varun
Enter age of person 2: 19
arun is older than varun.
```
