Ques1- Write a Python program that displays the multiplication table of any number entered by the user using a while loop.

Instructions:

1. Take a number input.
2. Use a variable  $i = 1$ .
3. Print the product until  $i \leq 10$ .
4. Increment  $i$  each time.

Ques 2-Write a Python program to print each digit of a number on a separate line.

Instructions:

1. Take a number as input.
2. Extract the last digit using  $\%$ .
3. Store the digits reversed, then print them in order.
