Self-Made Assignment - Python

Introduction to Functions in Python

Ques 1:-Write a Python function that reverses a given string.

Instructions:

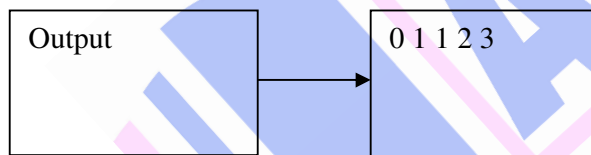

- Define a function named reverse string that:
- Accepts one parameter: a string.
- Reverses the string.
- Returns the reversed string.
- Test your function by calling it with different strings and printing the results.
Strings= Python, Hello, 12345.

Ques 2:- Write a function that prints the first n numbers of the Fibonacci sequence.

Instructions:

1. Define a function named fibonacci.
2. It should accept one parameter n (number of terms).
3. Print the Fibonacci sequence up to n terms.
