Self-Made Assignment - Python

Pass by Value and Reference in Python

Ques 1:- Replace First Element of a List?

Instructions:

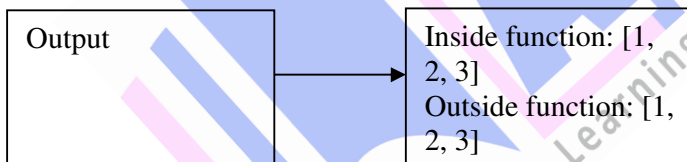

1. Define a function named replace first.
2. The function should accept a list lst as a parameter.
3. Change the first element of the list to a new value (e.g., 100).
4. Print the list inside the function.
5. Print the list outside the function to observe if the change is reflected.

Ques 2:- Pop Item from a List

Instructions:

1. Define a function named pop item.
2. The function should accept a list lst as a parameter.
3. Remove the last element of the list using the pop() method.
4. Print the list inside the function.
5. Print the list outside the function to observe if the change is reflected.
