&  
Test Series

Self-Made Assignment - Python

Scope of Variables

Ques 1:- Update Global Dictionary

Instructions:

- Create a global dictionary data = {"name": "Kavya", "age": 25}.
- Write a function update data(key, value) that updates the dictionary using global.
- Call the function to change name and age.
- Print the dictionary before and after updates.

Output

Before update: {'name':  
'Kavya', 'age': 25}  
After update: {'name':  
'Aisha', 'age': 30}

Ques 2:- Global Counter in a Loop

Instructions:

- Initialize a global variable count = 0.
- Write a function increase\_count() that increases count by 1.
- Use a loop to call increase\_count() 5 times.
- Print count after the loop.

Output

Count after loop: 5
