Ques: 1 Write a Python program to show how the same variable name behaves differently inside and outside a function.

Instruction (step by step)

- A global variable is created outside the function.
- A local variable is created inside the function.
- See which variable works where.

Ques: 2 Write a Python program to show that Python treats them as different variables. Explain how variable scope affects the program output.

Instruction (step by step)

- Same variable name used globally and locally.
- Python treats them as different variables.
