Ques: 1 Write a program to divide two numbers and handle division by zero error.

Instruction (step by step)

- Take two numbers
- If the second number is 0, show an error message
- Otherwise, show the result

Ques: 2 Write a program that handles more than one error.

Instruction (step by step)

- The try block will run the main code.
- The except block will handle any error.
- The finally block will always run, whether an error occurs or not.
- The program should not crash even if the user enters wrong input.
