

System software is a main component of computer. System software define as Software of computer.  
 All the processing of data.  
 All data process in system software.

Q5 Computer architecture

Q1. Computer mainly three component. Input, output, process. But it have many additional component

Input :- All data and information computer gathering by input devices.  
 like :- key board, mouse, scanner

Process :- The data or ~~of~~ information gathered by computer is processing by control unit and ALU unit.

Control unit :- All data ~~are~~ those not need to arithmetic operation process by control unit

ALU :- if data or ~~input~~ information is ~~now~~ need to arithmetic operation, it process by ALU unit

Memory :- All ~~data~~ process data is store by in memory unit. memory unit have two types

1. ROM 'Read only memory' is read the information and store it. Permanent

2. (RAM) ~~RAM~~ Read Access Memory is read the information and store temporarily

Output :- All Process and status  
information is show  
by output device like  
monitor, printer
